2.2 Add equipment

Before adding a device, power on the device , the device voice prompt "Welcome, please wait, wait for receiving wireless network information", the device is powered on successfully.

- Go to the "Maniu Camera" app, as shown below :

Click "+" in the upper right corner to enter the add mode selection page. The Maniu Camera App provides two ways to add devices.

(1) Click "Select Add" to enter the device selection page, select the device model to be added, and enter the configuration device page, as shown below.

(2) Scan the device body QR code to enter the configuration device page, as shown below

- If you hear the device voice prompt "Ready to accept wireless

network information” , click “Already heard voice prompt” to enter the configuration Wi-Fi page. If you do not hear the voice prompt, you can reset the device.

- Wi-Fi configuration page, select WiFi, enter the password, click "Configure Wi-Fi" (please note: 5G band WiFi is not supported at this time) as shown below :

- After the Wi-Fi configuration is successful, enter the Send Sound Wave page. Please adjust the volume of the mobile phone to moderate. Click “Send Sound Wave” to bring the mobile phone close to the camera so that the camera can receive the sound wave sent by the mobile phone. If you hear the prompt “Send wireless network information successfully” , click the button "Receive wireless network information successfully" to enter the connected wireless network page.

- On the connection to the wireless network page, please connect the router, mobile phone, and device as close as possible, and wait patiently for a while.

- After the device is successfully bound, enter the device configuration page. Customize the device name, select the device installation method, set the motion detection push, and adjust the motion detection sensitivity. As shown below :

2.3 Live preview

2.3.1 Live broadcast

In the list of home devices, click on the screen to enter the live broadcast page of the device. As shown below :

The following is the function button of the live page :

Function key	Name	Functional description
	Audio switch	Controls the sound of turning live video on or off
	Local video	Record the video being played and save it to my album

	Voice intercom	Turn on voice intercom
	Screenshot	Capture the current live preview image and save it to my album
	Switching code stream	Provide HD, Smooth two states to choose
	Reset position	One-click reset device initial position
	Favorite location	One-click collection of favorite locations
	Full screen	Click to watch live video in full screen

2.3.1.1 position

On the live page, turn the pan/tilt, find the favorite location, click “Favorite Location” , select the custom name, save the favorite location, click “Location” in the bottom navigation bar to view.

2.3.1.2 news

On the live page, click on the “news” in the bottom navigation bar

to view a list of alarm messages for this device. In the message list, select the message to view the alarm video. As shown below :

2.3.1.3 Playback

On the live page, click on the bottom navigation bar "Playback" to enter the playback page. The Maniu Camera provides two playback modes for cloud playback and card playback. As shown below :

- Card playback

To use this function, you need to insert an SD card into the device in advance, and format the SD card in the Settings - Memory Card Management page to select the recording mode.

Multiple function: Maniu camera provides 1/2X; 1X; 2X and other three speed options.

- Cloud playback

After using the cloud playback function, you need to purchase a cloud storage service. After the new device is successfully bound, you will be given free cloud storage. After the free trial cloud storage expires, you need to purchase cloud storage.

One-day quick view: The Maniu camera provides a one-day quick

view function to quickly play a day cloud storage video.

2.3.2 Share
